The ROTUNDA digital imprint of the University of Virginia Press, in collaboration with the Society of Architectural Historians, is beginning production of a digital version of the *Buildings of the United States* reference series. We are looking for graduate or undergraduate students who can commit to a few hours a week with us during the spring term of 2011 to help with:

- verifying and creating geospatial location information
- XML metadata creation and quality assurance

This will be an unpaid and informal internship, but will offer you the opportunity to learn more about digital publishing (particularly print-to-Web conversion), XML text encoding including the TEI Guidelines, archival metadata standards, and geospatial computing concepts and tools. Technical experience is a plus but not a requirement.

For information, contact:
David Sewell, tel. 924-9973
dsewell@virginia.edu

*Buildings of the United States* is a series of richly illustrated guidebooks to the architecture of the United States sponsored by the Society of Architectural Historians (14 completed volumes in print since 1993). *BUS* eventually will encompass 60 volumes, each of which will be written by leading local and national scholars in the field and heavily illustrated with photographs and maps. For further information, visit [www.sah.org](http://www.sah.org).

ROTUNDA, the digital imprint of UVA Press, will develop and publish the online version of *BUS*. We may also have internship opportunities in other areas, from the electronic versions of the documentary editions of various Founding Fathers Papers projects to our first audiovisual publication, the recently published first installment of the Presidential Recordings/White House Tapes series. For further information, visit [rotunda.upress.virginia.edu](http://rotunda.upress.virginia.edu).
